RE: Final RCRA Facility Assessment Report

Dear Mr. DiGregorio:

The Missouri Department of Natural Resources' (MDNR) Hazardous Waste Program (HWP) has completed preparation of a final RCRA Facility Assessment (RFA) report for the SKF St. Louis facility. The final RFA report consists of the Environmental Priorities Initiative/Preliminary Assessment (EPI/PA) report dated April 13, 1992, as prepared by the Environmental Protection Agency's contractor and the RFA addendum dated September 30, 1996, as prepared by the MDNR's HWP. A copy of the final RFA report is enclosed for your information.

The final RFA report reflects the findings of the previous EPI/PA report as modified by the findings of the HWP's RFA addendum. These modifications resulted from further review of the HWP's facility files, the recent site reconnaissance and sampling visits and the resulting observations/analytical data. The final RFA report findings indicate no evidence of hazardous constituents release(s) from SWMU No. 3. Area of Concern (AOC) 2 remains with no visible evidence of releases(s) and no such indication in the EPI/PA report. All other SWMUs/AOCs at the St. Louis facility have been eliminated as a result of previous site activities. Hence, no further corrective action appears warranted at this time since contaminant releases were not indicated by the RFA sampling results nor is there other substantial evidence of releases. Please consult the final RFA report for further information concerning these findings.
